Text

We can make text **bold**, or *italic*, or `monospaced`, or <u>underlined</u>. Sometimes we need to use letters with gràve accents, ácute accents, ĉircumflexes, ümlauts, lőng umlauts, tildẽs, çedillas, macrōns, under̲bars, overdȯts, underdọts, r̊ings, brĕves, hacĕks, and tiêŝ. Dollar signs have to be escaped like $. Backslashes are typed like \, and tildes as ˜.

Take note that quotation marks are "backticks and apostrophes". Using ordinary "quotation marks" looks odd.
